

S&S Green Solutions Cylinder Recycling Program

Here at S&S we strive to help our customers achieve their goals of helping the environment, and implementing “green” procedures in their facilities. One way we can help is to offer our customers a cylinder recycling program. Any used, expired, or empty cylinders can be given to your sales rep or dropped off at one of our locations for proper disposal. This includes old or expired breathing air cylinders, and calibration gas cylinders. If we all do our small part we can help make our planet a little greener.

Please call our Safety Technical Center for any questions!
